DIGITAL LITERACY PROJECT REPORT

Submitted By:
Dhruv Sharma
Reg No: 25BCE10927
Branch: CSE Core

Introduction

In today's digital age, having basic digital literacy skills is very important for every student. This project was designed to help us understand how to use digital tools effectively, communicate professionally, and stay safe online. As a student digital ambassador, the goal was to create awareness among peers about responsible and efficient use of technology.

Through this project, I explored different platforms, created useful digital resources, and learned how to present myself professionally online. It also helped me understand the importance of cyber safety and proper communication in the digital world.

Task 1: Digital Literacy Infographic

For this task, I created an infographic using Canva. The infographic explains the concept of digital literacy and highlights important aspects such as useful tools, safe internet practices, professional online presence, and email etiquette.

While designing the infographic, I tried to keep the content simple and visually clear so that it can be easily understood by students. One interesting thing I found was how design plays an important role in communication. At first, arranging the content neatly was a bit difficult, but Canva made it easier with its templates.

This task helped me understand how to present information in a visually appealing and meaningful way.

Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. These platforms are very useful for students as they help in building a professional identity.

GitHub is used to store and share projects, LinkedIn helps in networking and showcasing achievements, and HackerRank is useful for practicing coding skills. I also added my educational details on LinkedIn and created a proper GitHub profile.

In the coming years, I plan to use these platforms regularly to improve my skills, build projects, and connect with professionals. This task made me realize how important it is to start building a digital presence early.

Task 3: Coding & Collaboration Platforms

For the coding part, I used HackerRank and solved a beginner-level problem. It helped me understand how coding platforms work and how problems are solved step by step.

For collaboration, I created a Google Form titled “Digital Literacy Quiz” with five questions. This form can be used to test the awareness level of students. I also checked the responses using Google Sheets.

This task showed me how digital tools can be used for both learning and collaboration. These tools will definitely help me in academics, especially in group work and project submissions.

Task 4: Email Etiquette & Communication

In this task, I wrote two professional emails — one for requesting an assignment extension and another for applying for an internship. I focused on keeping the emails clear, polite, and well-structured.

I also created a checklist of do’s and don’ts for social media usage. This helped me understand how small mistakes in communication can create problems.

For example, sending an email without a proper subject or using informal language can leave a bad impression. This task taught me the importance of maintaining professionalism in digital communication.

Task 5: Cybercrime Awareness

In this task, I studied UPI fraud, which is very common in India. I learned how scammers trick people into sharing sensitive details like OTP or UPI PIN.

What surprised me the most was how easily people can fall into such traps if they are not aware. I realized that even a small mistake can lead to financial loss.

After this task, I will be more careful while making online transactions and will never share personal details with unknown sources. Awareness is the best way to prevent cybercrime.

Conclusion

Overall, this project was very useful and practical. It helped me develop important digital skills that are required in today's world. From creating content to understanding online safety, every task added value to my learning.

I believe these skills will help me not only in academics but also in my future career. This project has made me more confident in using digital tools responsibly and professionally.
